

What's In My Food?

5210 Introduction

It can be a challenge sometimes to read and understand food labels, especially for children. This is a great way to teach children what nutritional value food items either possess or do not. Let your children explore what foods they like and do not like, what nutrition they may provide, and where they are grown or produced.

Food labels can help you limit the amount of fat, sugar and cholesterol in your diet by making it easier for you to compare one food item with another and choose the one with lower amounts. The ultimate goal is to use food labels to find food items with higher vitamins, fiber and protein. Share with us your ways to incorporate less sugar and fats in your diet and what techniques you may use with your children to eat healthier.
